

Ten reasons why you must choose the iPigeon Timer

The ONLY and REAL next generation timer in the market!

1. All-in-One design- build in AGPS/3G/Data/SMS

With the built in communication module, you can easily setup your communication requirement with highest security. You can enjoy the powerful online transmission capability for your race and training information.

Everything you need is in this ETS! Don't waste money on purchasing other systems where an external box and incumbent SIM card with high cost membership fees is required!

2. Unlike other systems no loft clock or second clock is required

You do not need to spend 200-300 Euro to buy a non-stop loft clocking device for the iPigeon system! A simple SD card is used with the iPigeon Club Antenna for race progress or race closing. So fast and simple, why would you consider any other system?

3. Powerful Internet and cloud database

You own not only a TOPigeon ETS, but also our powerful database support for free! We have provided the online results for pigeon racing for more than 10 years! The internet data center can be extended to your region, so you can enjoy the real time information!

4. 7 inches touch panel and in-display keyboard like your smart phone

The front side has a 7 inches large LED color display and 5 navigation hotkeys for fanciers to easily navigate in timer operation. The touch panel with the in-display keyboard can provide you the easiest way to enter data to the clock.

You **DO NOT** need to laboriously type your ring number by using UP and DOWN button to select from ABCD...to 1234....

5. RFID reader inside

Lower left side has an embedded RFID reader inside. **Our unique** RFID reader can be your backup solution if you don't use the antenna board, or your loft antenna **should malfunction, so no risk of missing any races.**

The RFID reader also can read TOPigeon chip ring's UID if your pigeon club support UID regulation. The reader can also test chip rings and help fanciers to identify specific birds in your loft easily.

6. High volume speaker to read out the bird's ring number

There is a high volume speaker in the lower right side which provides different audio signal during clock operation. **The speaker can also read the last two digits of the pigeon association ring number** which can help the fancier to easily identify which specific birds have arrived without even watching the clock!

You DO NOT need to go to your loft to identify which bird has arrived.

7. Patented Landing Pad Connector

Equipped with latest technology, the cable provides the best connection with your clock and landing pads. Most important, it is waterproof **and** will not get rust in the connection which can extend the **life usage**.

8. Mobile Power Bank

High capacity of Lithium battery can sustain stable power supply for **the** iPigeon clock for over 10 hours.

Most importantly, it can also support most other makes of clock and club antenna systems!

9. Powerful Club Manager Systems

We have strong in-house IT development teams who develop most advanced Club Manager Systems, from single site club system to Client-Server architecture systems which support more than 1,000 members in the single club (MMFCi). The Club system is designed in a way that easily exports and imports a file for large club operation and also provides a free result function in the system.

We can quickly adopt your localized requirement and customize for your club or federation!

10. The iPigeon ETS has the Best Cost Comparison!

Everything you need is in this one system! You don't need to spend anything more for additional external equipments in the near future! No other brand can provide such a fully functional clock at such a competitive price!

Multiple languages support, easy version upgrade, on-clock calculation of speed, free UNIVES cable and so on.... You will find even more reasons to have the iPigeon ETS system, please contact us for more information now!
