

SUMMARY

SANPO was requested to evaluate the iPigeon V8 pigeon clock from TOPigeon for approval and racing in South Africa.

For this evaluation, the manufacturer, Avance Technology (Taiwan) and the supplier in South Africa, Mr Ray Haywood, provided for a complete TOPigeon system (V8) iPigeon electronic clock, club antenna with all additional hardware and the technical documentation and software needed to perform the approval evaluation.

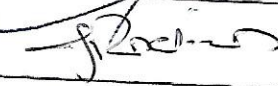

Testing of the iPigeon v8 was conducted for internal and external security, and alongside the FCI Report of the said clock.

It is concluded that after certain software enhancements were done, the logical, physical protection and integrity of race data results in the TOPigeon system comply with the applicable SANPO requirements and is therefore **APPROVED** for racing in South Africa.

NOTE: The Home Evaluation functionality was **NOT APPROVED** due to the fact that FCI documentation and certification could not be presented at this time.

Item	Description	Remarks
Hardware Version:	iPigeon V8	Approved
Software Version:	Ver 8.21a (minimum version)	Approved
Electronic Ring ID	0xAA	Approved
